

CLAIMS

1. What I claim my invention is a retro-fit side-signal light kit for vehicles to attain the safety of a side-signal light that is relatively inexpensive.
2. The side-signal lights are affixed to a vehicle with an adhesive strip on the back side, to securely mount the lights to a vehicle without permanent damage or alteration.
3. The side-signal light kit can be installed without the need for special tools or technical knowledge, as per simple instructions enclosed.
4. The side signal lights are affixed with a curved flange on the base, contoured so as to wrap around the trailing edge of the fender to extend the connected electrical wires to the interior surface of the fender and concealed from view.
5. The side-signal lights are affixed with quik-clips or such on the distal ends so as to make easy connection with the existing signal light wires.
